# 文档类 cjluexam 使用说明

jiaopjie\*

2023/02/05 v1.1.2

# 1 简介

cjluexam 是中国计量大学试卷的 IPTEX 模板. 本模板按照《中国计量大学试卷格式》和《中国计量大学试卷参考答案及评分标准》及给出的 Word 模板编写. 下载地址如下.

- https://github.com/jiaopjie/cjluexam
- https://gitee.com/jiaopjie/cjluexam

## 1.1 宏包要求

本模板直接依赖的宏包有: expl3, xparse, ctex, geometry, titleps, lastpage, tikz, graphicx, tabularx, totcount, enumitem, tasks.

#### 1.2 注意事项

- 建议使用 XeLaTeX 编译.
- ctex 宏包应升级到 2.0 以上版本.
- 得分栏列数根据 section 计数器自动调整, 请用 \section 命令输入题目标题.
- 题目数最好不要超过 10.
- 正确得到装订线、座位号、得分栏、总页数等需要编译 2 遍.

#### 1.3 模板结构

本模板由模板文件和示例文档组成,如表 1 所示. 编写试卷时在示例文档内进行相应的替换即可.

<sup>\*</sup>jiaopjie@cjlu.edu.cn

表 1: 模板结构

类别	文件	说明
模板文件	cjluexam.dtx	模板代码文件
	cjluexam.cls	文档类文件
	cjluexam.ins	模板安装文件
	cjluexam.pdf	模板说明
	README.md	简要文本说明
示例文档	exam.tex	试卷源文件
	exam.pdf	试卷
	answer.tex	参考答案及评分标准源文件
	answer.pdf	参考答案及评分标准

# 2 说明

本模板基于标准文档类 article 编写.

排版试卷时, 根据全局的文档选项 twoside/oneside 优化了装订线的位置.

oneside 装订线设在奇数页.

twoside 装订线设在模 4 余 0、1 的页面.

## 2.1 文档设置接口

\cjluexamset \cjluexamset = {\键值列表}}

New: 2022-01-14 文档设置的接口, 参数是一组由逗号分隔的选项列表. 选项通常是  $\langle key \rangle = \langle value \rangle$  的格式, 例如:

```
\cjluexamset{
    academicyear = {2020~2021}, % 学年
    term = 1, % 学期
}
```

## 2.2 设置选项

文档类别 包括: 试卷、参考答案及评分标准, 以及相应的英文版.

```
answer answer = \langle true | false \rangle english english = \langle true | false \rangle
```

分别为排版参考答案、英文版文档的开关, 默认均关闭.

#### 基本信息 排版试卷或参考答案均需提供.

```
academicyear academicyear = \langle 学年\rangle
term term = \langle 学期\rangle
course course = \langle 课程名\rangle
type type = \langle 试卷类型\rangle
```

## 可选信息 可根据实际情况酌情提供.

```
college college = \langle  开课学院\rangle openbook openbook = \langle true|false\rangle seat seat = \langle true|false\rangle
```

排版试卷时选填. openbook 和 seat 分别是开卷考试、座位号的开关, 默认关闭.

```
carryon carryon = \langle \text{可带入考场的物品} \rangle
testyear testyear = \langle \text{考试时间-F} \rangle
testmonth testmonth = \langle \text{考试时间-F} \rangle
testday testday = \langle \text{考试时间-H} \rangle
testtime testtime = \langle \text{考试时间-H} \rangle
仅排版中文版试卷时选填.
```

```
teacher teacher = 〈教师〉
testdate testdate = 〈考试时间〉
classroom classroom = 〈考场〉
```

仅排版英文版试卷时选填.

```
college college = 〈开课学院〉
class class = 〈班级〉
teacher teacher = 〈教师〉
排版参考答案时选填.
```

示例 实际排版时,应在导言区设置好选项.可参考下面的示例.

```
\cjluexamset{
 academicyear = {2020\sim2021}, %学年
                        % 学期
           = {1},
 term
                        %科目
           = {高等数学},
 course
            = \{A\},
                        % 试卷类型
 type
            = {理学院},
                        % 开课学院
 college
                         %开卷
 openbook,
                         %座位号
 seat,
}
```

## 2.3 其他设置

**得分栏** 列数会根据 section 计数器自动调整. 若输入题目标题时未使用 \section 命令, 应手动设置 section 计数器的值.

```
\setcounter{section}{9}
```

**题目标题** section 标题设置为无衬线字体. 下面第一行可清除该设置; 第二行设置标题后不换行, 直接排版后续内容.

```
\ctexset{section/format={}}
\ctexset{section/runin=true}
```

字体 用 XeLaTeX/LuaLaTeX 编译时, 可通过 fontspec 宏包修改字体.

```
\setCJKmainfont{SimSun}
\setCJKsansfont{SimHei}
```

#### 2.4 正文

输出标题 模板重定义了 \maketitle 命令生成标题.

\maketitle 生成标题、试卷信息、得分栏、座位号等.

下划线 填空题的水平横线可用 \Fill 命令.

\Fill [(长度)] {(内容)}

New: 2021-06-11 生成带指定最小长度下划线的文本. 〈长度〉的缺省值是 4em; 〈长度〉大于〈内容〉的 Updated: 2022-01-14 自然宽度时, 文本居中.

**列表** 选择题的选项可使用 tasks 环境. 下面环境选项中的 (2) 表示每行设 2 个制 表位. 环境中的 \task\*(2) 表示该项占两个制表位.

```
\begin{tasks}(2)
\task A
\task*(2) A
\task*(2) A
\end{tasks}
```

## 3 实现代码

```
1 (*class)
               2 (@@=cjluexam)
                   载入 article 文档类, 并把文档选项传递给它.
               3 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}
               4 \ProcessOptions
               5 \LoadClass{article}
                    选项
              3.1
               6 \RequirePackage{expl3,xparse}
               7 \keys_define:nn {cjluexam}
              文档类别:参考答案、英文版.
      answer
                                 .bool\_gset: N = \g\_cjluexam\_answer\_bool,
     english
                   answer
                                             = false,
                   answer
                                 .initial:n
               10
                                 .bool\_gset: N = \g\_cjluexam\_english\_bool,
                   english
               11
                   english
                                .initial:n = false,
              (End definition for answer and english. These functions are documented on page 2.)
              基本信息: 学年、学期、课程名、试卷类型.
academicyear
                   academicyear .tl_gset:N
                                             = \g__cjluexam_academicyear_tl,
               13
        term
                   academicyear .initial:n
                                              = {20\underline{\qquad}\~{}20\underline{\qquad}},
      course
                                .tl_gset:N
               15
                   term
                                              = \g_cjluexam_term_tl,
                                              = \underline{\quad},
                                .initial:n
               16
                   term
        type
                                .tl_gset:N
                                              = \g_cjluexam_course_tl,
                   course
               17
                                .initial:n
                   course
                                              = \hspace{6em},
               18
                                 .tl_gset:N
                                              = \g__cjluexam_type_tl,
               19
                   type
                                 .initial:n
                                              = \quad,
                   type
              (End definition for academicyear and others. These functions are documented on page 3.)
              开课信息: 开课学院、教师.
     college
                                 .tl_gset:N
                                              = \g_cjluexam_college_tl,
     teacher
                   college
                                 .tl_gset:N
                                             = \g_cjluexam_teacher_tl,
                   teacher
              (End definition for college and teacher. These functions are documented on page 3.)
              试卷信息: 开闭卷、座位号.
    openbook
                   openbook
                                 .bool_gset:N = \g_cjluexam_openbook_bool,
              23
        seat
                                 .initial:n = false,
                   openbook
               24
                                 .bool_gset:N = \g__cjluexam_seat_bool,
                   seat
               25
                   seat
                                .initial:n = false,
              (End definition for openbook and seat. These functions are documented on page 3.)
```

class 考试信息: 考生班级、考场、允许带入考场的物品、考试时间.

```
class
                             .tl_gset:N
                                          = \g__cjluexam_class_tl,
classroom
               classroom
                             .tl_gset:N
                                          = \g__cjluexam_classroom_tl,
           28
 carryon
                                          = \g_cjluexam_carryon_tl,
           29
              carryon
                             .tl_gset:N
                             .tl_gset:N
                                         = \g_cjluexam_testdate_tl,
              testdate
testdate
           31 testyear
                             .tl_gset:N
                                         = \g_cjluexam_testyear_tl,
testyear
                                          = \g__cjluexam_testmonth_tl,
               testmonth
                             .tl_gset:N
                             .tl_gset:N
                                           = \g__cjluexam_testday_tl,
               testday
testmonth
                testtime
                             .tl_gset:N
                                          = \g__cjluexam_testtime_tl,
           34
 testday
           35 }
testtime
           (End definition for class and others. These functions are documented on page 3.)
```

\cjluexamset 文档设置的接口.

36 \NewDocumentCommand \cjluexamset { m } { \keys\_set:nn { cjluexam } { #1 } }

(End definition for \cjluexamset. This function is documented on page 2.)

#### 3.2 中文支持

若载入 fontspec 宏包,则对其使用 no-math 选项. 这样,通过该宏包修改主文档字体时不修改数学字体.

37 \PassOptionsToPackage{no-math}{fontspec}

载入 ctex 宏包提供中文支持. 选项 heading 启用标题格式设置功能. 选项 zihao=5 设置主文档字体尺寸为五号 (10.5 bp).

38 \RequirePackage[heading,zihao=5]{ctex}[2014/03/06]

## 3.3 版面

载入 geometry 宏包设置页面尺寸.

 ${\tt 39} \ \ \texttt{RequirePackage[a4paper,margin=30mm,footskip=6mm]\{geometry\}}$ 

载入 titleps 宏包设置页眉页脚. 其中 \setfoot 的三个参数分别表示左侧、中间、右侧的内容;

```
40 \RequirePackage{titleps}
41 \newpagestyle{main}[\zihao{-5}]
42 {\footrule\setfoot{}{\c__cjluexam_foot_tl}{}}
43 \pagestyle{main}
```

\c\_\_cjluexam\_foot\_tl 页脚内容. 其中, 总页数依赖 lastpage 宏包, \\_\_cjluexam\_binding: 设装订线.

```
44 \RequirePackage{lastpage}
45 \tl_const:Nn \c__cjluexam_foot_tl
46 {
47  \fangsong
48  \bool_if:NTF \g__cjluexam_answer_bool
49  {
50  \bool_if:NTF \g__cjluexam_english_bool
```

```
52

版本历史	
1.0.0	1.0.0
v1.0.0	v1.0.2
General: 封装为 cjluexam 文档类 1	General: 定义列格式说明符简化得分栏
v1.0.1	表格的输出
	定义宏命令储存页脚内容6
General: 总页数改用 lastpage 宏包 6	更改学期、学院、考试时间的宏名1

v1.0.3	\Fill: 参数 #1 改为可选参数 <u>1</u> 1
General: 设置列表环境 <u>12</u>	v1.1.1
设置浮动体默认的位置选项 13	General: 微调 section 格式 12
调整显式公式前后的空白 13	v1.1.2
调整浮动体前后的空白 13	General: 删除试卷格式规范的链接 1
v1.0.4	定义一些常用的宏 13
